

Test Identifier	Test Summery	Test Description	Precondition	Test Steps	Expected Result	UI / API	Status	Tester
UI_AdminDashboard_RenderCards_001	Verify Dashboard summary cards display for Admin	Ensure the Admin Dashboard successfully displays four summary cards: 'Categories', 'Plants', 'Sales', and 'Inventory' with correct icons and layouts.	Admin user is logged in and redirected to the Dashboard page.	1. Login as Admin. 2. Access the main landing page. 3. Verify the presence of 4 cards: Categories, Plants, Sales, and Inventory.	1. Dashboard page loads immediately. 2. cards are visible in a responsive grid layout. 3. Each card has appropriate title text and styled icon.	UI	Not Executed	215516N
UI_AdminDashboard_SummaryData_002	Verify counts/metrics in summary cards for Admin	Ensure that the summary cards display accurate data values fetched from the database.	Database contains known test data (e.g. 5 categories, 8 plants, 3 sales). Admin is logged in	1. Observe the counts on each card. 2. Cross-reference the counts with the database records.	1. Categories card displays correct counts (Main & Sub Categories). 2. Plants card displays correct values (Total & Low Stock). 3. Sales card displays correct sales and revenue.	UI	Not Executed	215516N
UI_AdminDashboard_CardHoverAnimation_003	Verify micro-animations when hovering over cards	Verify that hovering over any of the four dashboard cards scales the card up and shifts it along the Y-axis for visual feedback.	Admin is logged in and on the Dashboard page	1. Move the mouse cursor over the Categories, Plants, Sales, and Inventory cards. 2. Observe scaling/visual feedback.	1. Hovering over a card causes it to scale up slightly (transform: scale(1.05) translateY(-5px)) with a smooth transition. 2. Cursor changes to pointer. 3. Card elevation increases.	UI	Not Executed	215516N
UI_AdminDashboard_ManageCategoriesNav_004	Verify 'Manage Categories' button navigation on Admin Dashboard	Ensure that clicking the 'Manage Categories' button on the Categories summary card redirects the Admin user to /ui/categories.	Admin user is logged in and on the Dashboard page.	1. Click the 'Manage Categories' button on the Categories summary card. 2. Observe the page URL and header.	1. User is redirected to /ui/categories. 2. Category list page loads successfully.	UI	Not Executed	215516N
UI_AdminDashboard_ManagePlantsNav_005	Verify 'Manage Plants' button navigation on Admin Dashboard	Ensure that clicking the 'Manage Plants' button on the Plants summary card redirects the Admin user to /ui/plants.	Admin user is logged in and on the Dashboard page.	1. Click the 'Manage Plants' button on the Plants summary card. 2. Observe the page URL and header.	1. User is redirected to /ui/plants. 2. Plant list page loads successfully.	UI	Not Executed	215516N
UI_UserDashboard_RenderCards_006	Verify Dashboard summary cards display for User	Ensure the Normal User Dashboard successfully displays the summary cards and their metrics.	Normal User is logged in and on the Dashboard page.	1. Login as normal user (testuser / test123). 2. Observe the landing dashboard. 3. Verify the visible summary cards.	1. Dashboard loads immediately. 2. User sees Categories, Plants, and Inventory cards. 3. User can view Sales summary card but lacks buttons to create sales.	UI	Not Executed	215516N
UI_UserDashboard_ViewSalesNav_007	Verify 'View Sales' button navigation on User Dashboard	Ensure that clicking the 'View Sales' button on the Sales summary card redirects the normal user to /ui/sales.	Normal User is logged in and on the Dashboard page.	1. Click the 'View Sales' button on the Sales summary card. 2. Observe the page URL and header.	1. User is redirected to /ui/sales. 2. Sales list page loads in read-only mode (without 'Sell Plant' button).	UI	Not Executed	215516N
UI_UserDashboard_SummaryCounts_008	Verify counts display correct values for User	Verify dashboard cards display correct database values, ensuring normal user role has read permission.	Database contains records. Normal User is logged in.	1. Observe the counts on each card. 2. Cross-reference the counts with the database records.	1. Summary numbers match actual system counts. 2. User is able to load these counts successfully without receiving authorization errors.	UI	Not Executed	215516N
UI_UserDashboard_OpenInventoryDisabled_009	Verify 'Open Inventory' link is disabled and shows tooltip	Ensure that the 'Open Inventory' link on the Inventory card is disabled (unclickable) and displays the tooltip 'Inventory page coming soon'.	Normal User is logged in and on the Dashboard page.	1. Locate the Inventory card on the Dashboard. 2. Verify that the 'Open Inventory' link has the 'disabled' class or attribute. 3. Hover over the link to verify the tooltip text.	1. The 'Open Inventory' link is disabled and cannot be clicked to navigate. 2. Tooltip displaying 'Inventory page coming soon' appears upon hover.	UI	Not Executed	215516N
UI_UserDashboard_ResponsiveLayout_010	Verify Dashboard responsiveness on mobile viewport	Ensure the Dashboard card grid and sidebar menu adjust correctly on smaller screens.	Normal User is logged in and on the Dashboard page.	1. Open developer tools. 2. Set viewport width to 375px (mobile). 3. Observe cards and sidebar.	1. Sidebar menu collapses or hides off-screen. 2. Cards stack vertically in a single column. 3. Text and values inside cards remain legible and don't overflow.	UI	Not Executed	215516N
API_Dashboard_GetPlantSum_Admin_001	Verify GET /api/plants/summary as Admin	Ensure the endpoint returns correct plant summary data when accessed by an Admin.	Admin token is available.	1. Send GET /api/plants/summary with Header Authorization: Bearer <admin_token>.	1. Status code is 200 OK. 2. Response is JSON containing totalPlants (integer) and lowStockPlants (integer).	API	Not Executed	215516N
API_Dashboard_GetCategorySum_Admin_002	Verify GET /api/categories/summary as Admin	Ensure the endpoint returns correct category summary data when accessed by an Admin.	Admin token is available.	1. Send GET /api/categories/summary with Header Authorization: Bearer <admin_token>.	1. Status code is 200 OK. 2. Response is JSON containing mainCategories (integer) and subCategories (integer).	API	Not Executed	215516N
API_Dashboard_GetPlantSum_User_003	Verify GET /api/plants/summary as User	Ensure the endpoint returns correct plant summary data when accessed by a normal User.	Normal User token is available.	1. Send GET /api/plants/summary with Header Authorization: Bearer <user_token>.	1. Status code is 200 OK. 2. Response body matches the schema containing total and low stock plants.	API	Not Executed	215516N
API_Dashboard_GetCategorySum_User_004	Verify GET /api/categories/summary as User	Ensure the endpoint returns correct category summary data when accessed by a normal User.	Normal User token is available.	1. Send GET /api/categories/summary with Header Authorization: Bearer <user_token>.	1. Status code is 200 OK. 2. Response body matches the schema containing main and sub categories.	API	Not Executed	215516N
API_Dashboard_GetHealth_Admin_005	Verify GET /api/health as Admin	Ensure the health check endpoint returns status UP when called by an Admin.	Admin token is available.	1. Send GET /api/health with Header Authorization: Bearer <admin_token>.	1. Status code is 200 OK. 2. Response body returns {'status': 'UP'}.	API	Not Executed	215516N
API_Dashboard_GetHealth_User_006	Verify GET /api/health as User	Ensure the health check endpoint returns status UP when called by a normal User.	Normal User token is available.	1. Send GET /api/health with Header Authorization: Bearer <user_token>.	1. Status code is 200 OK. 2. Response body returns {'status': 'UP'}.	API	Not Executed	215516N

Test Identifier	Test Summery	Test Description	Precondition	Test Steps	Expected Result	UI / API	Status	Tester
API_Dashboard_GetSalesPage_Admin_007	Verify GET /api/sales/page as Admin	Verify that Admin can retrieve a paginated sales list for rendering on the Dashboard.	Admin token is available.	1. Send GET /api/sales/page?page=0&size=5 with Header Authorization: Bearer <admin_token>.	1. Status code is 200 OK. 2. Response contains pagination data (pageable, totalElements, content).	API	Not Executed	215516N
API_Dashboard_Unauthorized_NoToken_008	Verify GET /api/plants/summary fails with no token	Verify that the system denies access to dashboard summary APIs when no token is provided.	No authentication token is sent.	1. Send GET /api/plants/summary without Authorization header.	1. Status code is 401 Unauthorized. 2. Error message states 'Unauthorized - Use Basic Auth or JWT'.	API	Not Executed	215516N
API_Dashboard_InvalidToken_009	Verify GET /api/categories/summary fails with invalid token	Ensure the system rejects dashboard calls with an invalid or expired token.	Invalid token string is used.	1. Send GET /api/categories/summary with Header Authorization: Bearer invalid_token_xyz.	1. Status code is 401 Unauthorized. 2. Request is blocked.	API	Not Executed	215516N
API_Dashboard_CreateCategory_UserForbidden_010	Verify POST /api/categories fails for User role	Ensure that normal User cannot create a category from the dashboard/categories API.	Normal User token is available.	1. Send POST /api/categories with Header Authorization: Bearer <user_token> and body {'name': 'Indoor'}.	1. Status code is 403 Forbidden. 2. Response contains error 'Forbidden' and path '/api/categories'.	API	Not Executed	215516N
UI_Create_Salse_001	Create a Sale	Verify sale creation & reduces stock	Admin logged in and Plant stock available	1.Navigate to sales page 2.Click “Sell Plant” 3.Select plant 4.Enter valid quantity 5.Click Save	1. Sale created successfully 2. Stock reduced 3. Redirected to Sales list	UI	Not Executed	215519C
UI_Validate_Qty_Salse_002	Verify quantity validation	Verify quantity must be greater than 0	Admin logged in	1. Navigate to sale page 2. Open Sell Plant page 3. Enter quantity 0 4. Click 'sell' button	1.Validation message displayed as “Quantity must be greater than 0”	UI	Not Executed	215519C
UI_Salse_Cansel_Button_003	Verify cancel button	Verify Cancel returns to sales list	Admin logged in	1. Navigate to sale page 2. Click 'cancel' button	1.User redirected to Sales list page	UI	Not Executed	215519C
UI_Sorting_by_Qty_Salse_004	Verify sorting by Quantity	Verify sorting works when clicking Quantity column	Admin logged in and Sales data exist	1. Go to Sales page 2. Click “Quantity” column header	1.Sales sorted by Quantity correctly	UI	Not Executed	215519C
UI_Sorting_by_Tot_Price_Salse_005	Verify sorting by Total Price	Verify sorting works when clicking Total Price column	Admin logged in and Sales data exist	1. Go to Sales page 2. Click “Total Price” column header	1.Sales sorted by Total Price correctly	UI	Not Executed	215519C
UI_Display_Salse_006	Verify User can view Sales list	Verify logged-in User can view sales records	User logged in as User and Sales records exist	1. Click on “Sales” in side navigation	1. Sales page loads successfully 2. Sales list is visible	UI	Not Executed	215519C
UI_Sorting_Default_Salse_007	Verify default sorting by Sold Date	Verify sales are sorted by Sold Date descending by default	User logged in and Sales records exist	1. Navigate to Sales page	1.Sales sorted by Sold Date in descending order	UI	Not Executed	215519C
UI__Empty_Salse_008	Verify empty sales message	Verify system displays message when no sales exist	User logged in and No sales records	1. Navigate to Sales page	1.“No sales found” message is Displayed	UI	Not Executed	215519C
UI_Sorting_By_Sold_At_Salse_009	Verify sorting by Sold At	Verify sorting works when clicking Sold At column	User logged in and Sales data exist	1. Go to Sales page 2. Click “Sold At” column header	1.Sales sorted by Sold At correctly	UI	Not Executed	215519C
UI_User_Pagination_Salse_010	Verify pagination in sales list	Verify pagination controls are visible	User logged in and Sales exceed one page	1. Open Sales page	1.Pagination controls are displayed and functional	UI	Not Executed	215519C
API_Admin_Retrieve_Sale_011	Verify Admin can retrieve all sales successfully	Ensure that the system allows an authenticated Admin user to retrieve all existing sales records using the Sales API	1. Admin is logged in 2. Valid Admin access token is available 3. Sales records exist in the system	1. Navigate to GET /api/sales 2. Add Authorization header with valid Admin token 3. Send the request	1. Response status code is 200 OK 2. Response body contains a list of sales 3. Each sale object includes: id, plant object with correct details, quantity, totalPrice, soldAt timestamp	API	Not Executed	215519C
API_Admin_Retrieve_Empty_Sale_012	Verify Admin receives empty list when no sales exist	Ensure that the system returns an empty sales list when an authenticated Admin user requests sales data and no sales records exist in the system	1. Admin is logged in 2. Valid Admin access token is available 3. No Sales records exist in the system	1. Navigate to GET /api/sales 2. Add Authorization header with valid Admin token 3. Send the request	1. Response status code is 200 OK 2. Response body is an empty array. [] 3. No error message is returned.	API	Not Executed	215519C
API_Admin_Sell_Plant_013	Verify Admin can successfully sell a plant with valid quantity	Ensure that an authenticated Admin user can successfully sell a plant by providing a valid plant ID and quantity, and that the sale is recorded correctly	1. User is logged in as Admin. 2. Plant with the eneterd PlantId exists. 3. Plant stock quantity >= requested quantity.	1. Navigate to POST /api/sales/plant/{plantId} { "plantid:2", "quantity":20 } 2. Provide a valid plantId 3. Pass quantity with a positive integer value 4. Add Authorization header with Admin token 5. Send the request	1. Response status code is 201 created 2. Sale record is created 3. Response body contains:Sale id, Correct plant details, Sold quantity, Correct totalPrice, soldAt timestamp 4. Plant inventory quantity is reduced correctly	API	Not Executed	215519C

Test Identifier	Test Summery	Test Description	Precondition	Test Steps	Expected Result	UI / API	Status	Tester
API_Update_Inventory_Sale_014	Verify inventory is updated after successful plant sale	Ensure that the system does not create a sale and does not update inventory when an Admin attempts to sell a plant with an invalid quantity	1. User is logged in as Admin 2. Plant exists with known stock quantity	1. Navigate to POST /api/sales/plant/{plantId} { "plantid:2", "quantity":0 } 2. Note current plant stock quantity 3. Send POST request to sell the plant with quantity = 0 4. Provide valid plantId 5. Send the request	1. Response status code is 400 Bad Request 2. Response body contains:status,error, message indicating invalid quantity, timestamp 3. No sale is created 4. Inventory remains unchanged	API	Not Executed	215519C
API_Unauthorized_user_retrieve_sale_015	Verify unauthenticated user cannot retrieve sales	Ensure that the system prevents unauthenticated users from accessing sales data and returns an appropriate authorization error	1. User is not logged in 2. Plant exists with stock	1. Navigate to GET /api/sales 2. Send the request without Authorization header	1. Response status code is 401 Unauthorized 2. Authentication error message is returned	API	Not Executed	215519C
API_User_Retrieve_Sale_016	Verify user can retrieve all sales successfully	Ensure that an authenticated user can successfully retrieve all existing sales records using the Sales API	1. user is logged in 2. Valid Admin access token is available 3. Sales records exist in the system	1. Navigate to GET /api/sales 2. Add Authorization header with valid Admin token 3. Send the request	1. Response status code is 200 OK 2. Response body contains a list of sales 3. Each sale object includes: id, plant object with correct details, quantity, totalPrice, soldAt timestamp	API	Not Executed	215519C
API_User_Delete_Sale_017	Verify unauthenticated user cannot delete a sale	Ensure that the system prevents unauthenticated users from deleting a sale and returns an unauthorized access error	1. User is not logged in 2. No authentication token is provided	1. Navigate to DELETE /api/sales/{id}{"id":1} 2. Send a DELETE request to/api/sales/{id} with a valid saleId 3. Do not include Authorization header	1. Response status code is 401 Unauthorized 2. Sale is not deleted	API	Not Executed	215519C
API_No_Sale_ID_018	Verify API returns 404 when Sale ID does not exist	Ensure that the system returns a not found error when a request is made to retrieve a sale using a non-existing sale ID	1. User is logged in as Admin 2. Valid authentication token is available 3. Sale ID does not exist in database	1. Navigate to GET /api/sales/{id}{"id":1} 2. Send a GET request to /api/sales/{id} using a non-existing saleId	1. Response status code is 404 Not Found 2. Appropriate error message is returned indicating sale not found	API	Not Executed	215519C
API_Non_Admin_Delete_Sale_019	Verify non-Admin user is forbidden from deleting a sale	Ensure that the system restricts non-Admin users from deleting sales and returns a forbidden access error	1. User is logged in as non-Admin 2. Valid authentication token is available 3. Sale exists in the system	1. Navigate to DELETE /api/sales/{id}{"id":1} 2. Send a DELETE request to /api/sales/{id} using non-Admin token	1. Response status code is 403 Forbidden 2. Sale is not deleted	API	Not Executed	215519C
API_Sale_Internal_Server_error_020	Verify API returns 500 on internal server error	Ensure that the system returns an internal server error response when the backend service fails during a sales deletion request	1. User is logged in as Admin 2. Backend service or database is unavailable (simulated)	1. Navigate to DELETE /api/sales/{id}{"id":1} 2. Send a DELETE request to /api/sales/{id}	1. Response status code is 500 Internal Server Error 2. Appropriate server error is returned	API	Not Executed	215519C
UI_Category_AddMainCategory_001	Verify Admin can add a new main category with valid data	Verify that an admin user can suuccessfully create a new main category	1. Admin user is logged into the system 2. Admin is on the Category List page (/ui/categories)	1. Click Add Category button 2. Enter Category Name as "Wildflower" 3. Leave Parent Category selection empty 4. Click Save button	1. Add Category page is displayed 2. Category name "Wildflower" is entered successfully 3. Category is treated as a main category 4.1 Category "Wildflower" is saved successfully 4.2 System displays a success message 4.3 System navigates back to the Category List page 4.4 Newly added "Wildflower"category appears in the category list	UI	Not Executed	215556K
UI_Category_NameRequiredValidation_002	Verify validation message when Admin adds category without name	Verify that the system displays a validation error when the admin attempts to create a category without entering a category name.	1. Admin user is logged into the system 2. Admin is on Add Category page (/ui/categories/add)	1. Leave Category Name field empty 2. Click Save button	1. Category Name field remains empty 2.1 System displays validation message "Category name is required" below the Category Name field 2.2 Category is not created	UI	Not Executed	215556K
UI_Category_NameLengthValidation_003	Verify category name length validation for less than minimum characters	Verify that the system prevents the admin from creating a category when the category name length is less than the minimum allowed characters (3).	1. Admin user is logged into the system 2. Admin is on Add Category page (/ui/categories/add)	1. Enter Category Name as "In" (2 characters) 2. Click Save button	1. Category name with invalid length is entered 2.1 System displays validation message "Category name must be between 3 and 10 characters" 2.2 Category is not created	UI	Not Executed	215556K
UI_Category_EditExistingCategory_004	Verify Admin can edit an existing category with valid data	Verify that an admin user can successfully edit an existing category by updating the category name with a valid length and saving the changes, ensuring the updated details are reflected in the Category List.	1. Admin user is logged into the system 2. Admin is on Category List page (/ui/categories) 3. Category exists with Id = 1	1. Click Edit icon for an existing category "Wildflower" 2. Update Category Name to "Forb" 3. Click Save button	1. Edit Category page for "Wildflower" category is displayed 2. Updated category name "Forb" is entered successfully 3.1 Category details are updated successfully 3.2 System displays a success message 3.3 System navigates back to the Category List page 3.4 Updated category details are reflected in the list	UI	Not Executed	215556K
UI_Category_AddCategoryCancelAction_005	Verify Cancel button on Add Category page navigates back without saving	Verify that clicking the Cancel button on the Add Category page does not save the newly entered category and navigates the admin back to the Category List page.	1. Admin user is logged into the system 2. Admin is on Add Category page (/ui/categories/add)	1. Click Add Category button to open Add Category page 2. Enter Category Name "Forb" 3. Leave Parent Category empty 4. Click Cancel button	1. Add Category page is displayed 2. Category name "Forb" is entered successfully 3. Category is treated as a main category 4.1 The entered category is not saved in the system 4.2 System navigates back to Category List page 4.3 Category list remains unchanged	UI	Not Executed	215556K

Test Identifier	Test Summery	Test Description	Precondition	Test Steps	Expected Result	UI / API	Status	Tester
UI_Category_AccessAddCategoryPage_006	Verify User cannot access Add Category page via direct URL	Verify that a non-admin user is restricted from accessing the Add Category page even when the URL is manually entered in the browser.	1. User is logged into the system 2. User role is Non-Admin	1. Enter /ui/categories/add directly in the browser address bar 2. Press Enter	1. URL /ui/categories/add is entered in browser 2.1 User is redirected to 403 Forbidden page or redirected back to the dashboard 2.2 Access denied message is displayed 2.3 Add Category page is not displayed	UI	Not Executed	215556K
UI_Category_AccessEditCategoryPage_007	Verify User cannot access Edit Category page via direct URL	Verify that a non-admin user cannot access the Edit Category page even when a valid category ID is provided in the URL.	1. User is logged into the system 2. User role is Non-Admin 3. Category exists with Id = 1	1. Enter /ui/categories/edit/1 directly in the browser address bar 2. Press Enter	1. URL /ui/categories/edit/1 is entered in browser 2.1 User is redirected to 403 Forbidden page or redirected back to the dashboard 2.2 Access denied message is displayed 2.3 Edit Category form is not displayed	UI	Not Executed	215556K
UI_Category_AddCategoryButtonVisibility_008	Verify Add Category button is not visible to non-admin user	Verify that the Add Category button is hidden for non-admin users to prevent unauthorized access to category creation functionality.	1. User is logged into the system 2. User role is Non-Admin	1. Navigate to Category List page (/ui/categories) 2. Observe the page header and action buttons	1. Category List page is displayed 2.1 Add Category button is not visible to the user 2.2 User is unable to navigate to Add Category page via UI	UI	Not Executed	215556K
UI_Category_EditButtonVisibility_009	Verify Edit action is not visible to non-admin user	Verify that the Edit action is hidden or disabled for non-admin users on the Category List page.	1. User is logged into the system 2. User role is Non-Admin 3. At least one category exists	1. Navigate to Category List page (/ui/categories) 2. Observe the Actions column for each category	1. Category List page is displayed 2.1 Edit action/button is not visible or disabled for all categories 2.2 User cannot initiate category edit via UI	UI	Not Executed	215556K
UI_Category_DisplayCategoriesListAsUser_010	Verify User can view categories list with pagination	Verify the list of categories are displayed with pagination such that one page displays 10 categories. If more than 10 categories exist, Previous, Next and page buttons are shown.	1. User is logged into the system 2. User role is Non-Admin 3. At least 12 categories exist in the system	1. Navigate to Category List page (/ui/categories) 2. Observe categories table and pagination controls 3. Click the Next button 4. Observe the second page	1. Category List page is displayed 2.1 First page shows 10 categories 2.2 Next, Previous and page number buttons are visible 3. Next button is clicked 4.1 Second page loads with remaining categories 4.2 Page indicator updates correctly	UI	Not Executed	215556K
API_Category_CreateCategory_001	Verify Admin can create category via API with valid data	Verify that an admin user can successfully create a new category using the API by sending valid category data and receiving a successful response.	1. User is authenticated as Admin 2. Valid Bearer Token is available	1. Set HTTP method to POST 2. Set Endpoint URL to /api/categories 3. Set Authorization header to Bearer <admin_token> 4. Provide JSON body: { "name": "Wildflower" } 5. Send the request	1.1 API returns status code 201 Created 1.2 Response body contains newly created category 1.3 Category name is "Wildflower" 1.4 Category ID is auto-generated 1.5 Category is created successfully in the system	API	Not Executed	215556K
API_Category_EmptyCategoryNameValidation_002	Verify API validation when category name is empty	Verify that the API rejects category creation requests when the category name field is empty and returns an appropriate validation error.	1. User is authenticated as Admin 2. Valid Bearer Token is available	1. Set HTTP method to POST 2. Set Endpoint URL to /api/categories 3. Set Authorization header to Bearer <admin_token> 4. Provide JSON body: { "name": "" } 5. Send the request	1.1 API returns status code 400 Bad Request 1.2 Response body contains validation error 1.3 Error message states "Category name is required" 1.4 Category is not created	API	Not Executed	215556K
API_Category_CategoryNameLengthValidation_003	Verify API validation for category name length below minimum	Verify that the API enforces category name length validation when the provided name is outside the allowed range (less than 3 characters).	1. User is authenticated as Admin 2. Valid Bearer Token is available	1. Set HTTP method to POST 2. Set Endpoint URL to /api/categories 3. Set Authorization header to Bearer <admin_token> 4. Provide JSON body: { "name": "In" } 5. Send the request	1.1 API returns status code 400 Bad Request 1.2 Validation error message is returned 1.3 Error message states "Category name must be between 3 and 10 characters" 1.4 Category is not created	API	Not Executed	215556K
API_Category_UpdateCategory_004	Verify Admin can update an existing category via API	Verify that an admin user can successfully update an existing category using the API with valid data.	1. User is authenticated as Admin 2. Valid Bearer Token is available 3. Category exists with id = 1	1. Set HTTP method to PUT 2. Set Endpoint URL to /api/categories/1 3. Set Authorization header to Bearer <admin_token> 4. Provide JSON body: { "name": "Forb" } 5. Send the request	1.1 API returns status code 200 OK 1.2 Response body contains updated category data 1.3 Category ID remains 1 1.4 Category name is updated to "Forb"	API	Not Executed	215556K
API_Category_DeleteCategory_005	Verify Admin can delete a category via API with valid ID	Verify that an admin user can successfully delete an existing category using the API by providing a valid category ID.	1. User is authenticated as Admin 2. Valid Bearer Token is available 3. Category exists with a valid ID	1. Set HTTP method to DELETE 2. Set Endpoint URL to /api/categories/{id} with a valid category id 3. Set Authorization header to Bearer <admin_token> 4. Send the request 5. Send GET /api/categories/{id} to confirm deletion	1.1 API returns status code 204 No Content 1.2 Category is deleted successfully 1.3 Subsequent GET /api/categories/{id} returns 404 Not Found	API	Not Executed	215556K

Test Identifier	Test Summery	Test Description	Precondition	Test Steps	Expected Result	UI / API	Status	Tester
API_Category_CreateCategoryUnauthorized_006	Verify non-admin user cannot create category via API	Verify that a non-admin user is not authorized to create a category using the API and receives a 403 Forbidden response.	1. User is authenticated as Non-Admin 2. Valid Bearer Token is available	1. Set HTTP method to POST 2. Set Endpoint URL to /api/categories 3. Set Authorization header to Bearer <user_token> 4. Provide JSON body: { "name":"Wildflower" } 5. Send the request	1.1 API validates user authorization 1.2 API returns status code 403 Forbidden 1.3 Category "Wildflower" is not created	API	Not Executed	215556K
API_Category_EditCategoryUnauthorized_007	Verify non-admin user cannot update category via API	Verify that a non-admin user cannot update existing category data using the API and receives a 403 Forbidden response.	1. User is authenticated as Non-Admin 2. Valid Bearer Token is available 3. Category exists with id = 1	1. Set HTTP method to PUT 2. Set Endpoint URL to /api/categories/1 3. Set Authorization header to Bearer <user_token> 4. Provide JSON body: { "name": "Forb" } 5. Send the request	1.1 API validates user role 1.2 API returns status code 403 Forbidden 1.3 Category remains unchanged	API	Not Executed	215556K
API_Category_DeleteCategoryUnauthorized_008	Verify non-admin user cannot delete category via API	Verify that a non-admin user is not authorized to delete an existing category using the Category API.	1. User is authenticated as Non-Admin 2. Valid Bearer Token is available 3. Category exists with a valid ID	1. Set HTTP method to DELETE 2. Set Endpoint URL to /api/categories/{id} with a valid category id 3. Set Authorization header to Bearer <user_token> 4. Send the request	1.1 API validates user authorization 1.2 API returns status code 403 Forbidden 1.3 Category is not deleted 1.4 Category data remains unchanged	API	Not Executed	215556K
